People are always on the lookout for new and innovative products, ideas, and solutions. Minimally invasive bariatric surgery. Minimally invasive bariatric surgery is a rapidly developing field of surgery. There has been an explosion of minimally invasive techniques developed during the last decade to address the obesity epidemic. These techniques include sleeve gastrectomy, adjustable gastric banding, laparoscopic gastric bypass, and laparoscopic-assisted gastric banding. The most recent innovation is the robotic-assisted technique. Although these techniques have obvious benefits in terms of decreased surgical trauma, the impact on weight loss and surgical outcomes are less clear. The laparoscopic approach to bariatric surgery is the most common and the most studied; however, the minimally invasive approach offers the advantage of decreased surgical trauma, which should translate into decreased surgical complications. More research is needed to validate these minimally invasive approaches and determine the impact of less invasive surgical techniques on weight loss and clinical outcomes. . 0 L e t q b (- 8) / 2 4 * 1 + 82157476af
